

El Molino Systems S.L.

www.europe-satellite.com

Green = online

Orange = close to the 30 day limit

Red = over the 30 days limit, system very slow, browser time outs, email time outs, no connection.

please note the 'traffic statistics' are representative of the specific moment they were sent – which means they are continually in motion eg: so what could be orange at the moment statistics were sent could have just an hour before been in red – therefore please remember just because you are in orange doesn't mean that you have always been in orange (if you were in red an hour/day before it means the system would have cut you off) and as soon as you are back in orange you would be online again, although still close to your limit – and the system would appear to be going on and off – **IN THESE CIRCUMSTANCES** ie: when you are in **ORANGE** please make sure you limit your usage until you are back in the **GREEN** or you will encounter the same problems over and over again ie: the system going 'on and off'.

THIS BANDWIDTH CONTROL SYSTEM is managed by SKYLOGIC Spa Italy and NOT by El Molino Systems S.L. or any other agent and therefore we cannot have any influence on this system of bandwidth control. Once system has been activated by us, SKYLOGIC Spa manages bandwidth control and the agent eg: us (in this case) just deal with the administration and first-line support.
